VCM Software

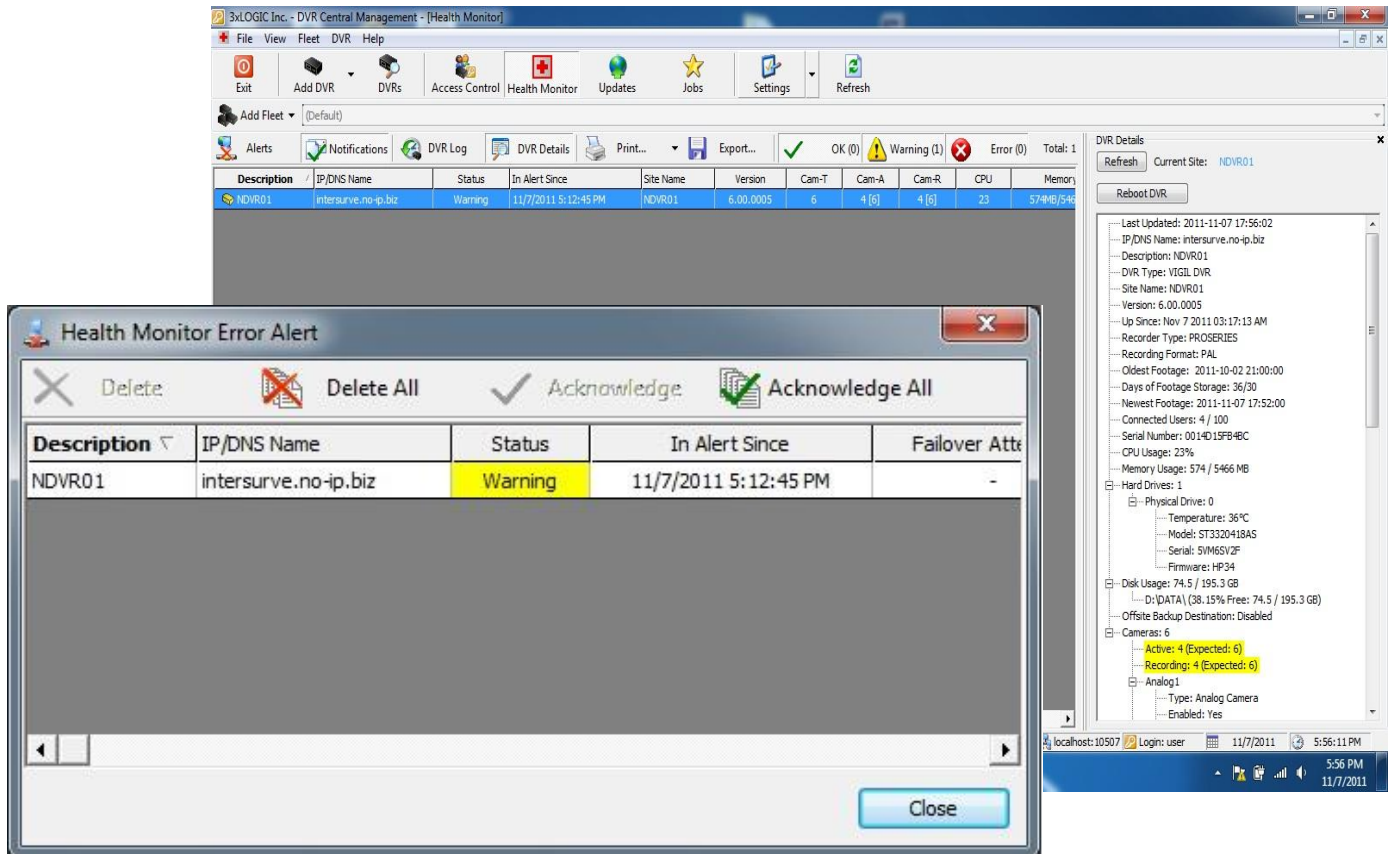

3xLOGIC VIGIL™ Series Solutions

VIGIL™ VCM

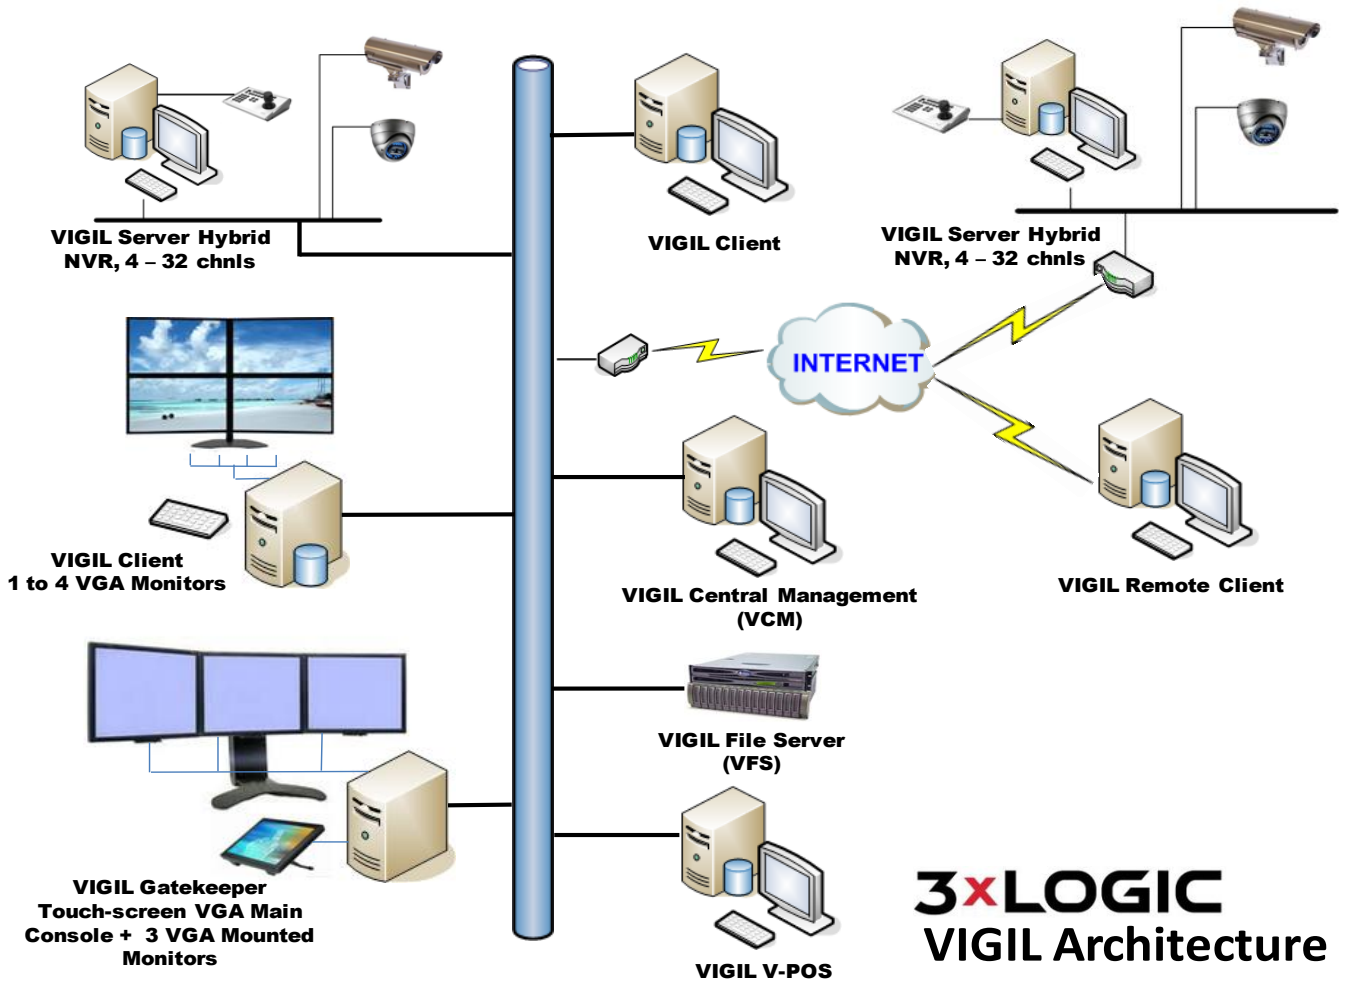

The 3xLOGIC VIGIL VCM software is an enterprise monitoring application designed to manage multi site environments. It provides IT professionals with the tools they need to effectively manage multiple Network Video Recorders (NVRs) over IP networks.

A networked 3xLOGIC NVR is an extremely intelligent device and working together with the VIGIL VCM software application you will be notified immediately if there is a potential problem with the DVR. And because the systems are networked, most troubleshooting can be done remotely.

Features

- ◆ Automatically monitors the health of the 3xLOGIC NVR's CPU, drive temperature, disk failure, camera video loss, etc.
- ◆ True Client-Server application and supports multiple client connections simultaneously. Only the Server application requires a software license.
- ◆ Allows VCM users to be configured into site groups specific to the NVR they have ownership of. This allows the VCM administrator to setup the system in a way to only display sites related to the region or location.
- ◆ Manages the NVR user access levels and their associated privileges. No need to be on-site to remove old users or add new ones.
- ◆ Has the ability to upload or download the NVR settings. In the event the unit fails, the settings can be quickly downloaded to drastically reduce system down time.
- ◆ Monitors the connected NVRs for the amount of day's storage and generates an alert if the specified amount of days is not met.
- ◆ Centralized management of the NVR software versions, including scheduling for managed network deployment of updates.
- ◆ Used as a central database server for analytics data. Polls analytics data from the NVRs such as People Counting, Lane Queue monitoring or end cap dwells. This accumulative data can then be used with the 3xLOGIC VIGIL TRENDS application for automated reports and charts or the raw data can be sent to customer specific applications.
- ◆ The system can be configured to notify via local alarm screen pop-up email, or text messaging via email.
- ◆ The VIGIL VCM application is completely scalable, from one to many hundreds of NVRs.
- ◆ XP, 2000, and Windows 7 certified.

3xLOGIC
VIGIL Architecture

VCM Server	
<i>OS</i>	Windows 2000/XP/2003 Server/Win7
<i>Hardware</i>	Min. 3GHz Dual Core, 2GB RAM, 500GB hard drive
<i>Screen Resolution</i>	Min. 1024x768
